# White Paper: Grafana & Prometheus on HPE GreenLake with NVIDIA

## Introduction

This document provides a technical overview and deployment guide for Grafana and Prometheus in HPE GreenLake environments with NVIDIA hardware.

## Table of Contents

- Installation
- Configuration
- Troubleshooting
- References

## Installation

The repo has many prometheus related charts. The chart we want is called “kube-prometheus-stack”. This chart also includes sub-chart of grafana.

### Add repo

```
1 helm repo add prometheus-community https://prometheus-community.github.io/helm-charts
2 helm repo update
```

### Install

```
1 helm install kube-prometheus-stack prometheus-community/kube-prometheus-stack --namespace
   monitoring --create-namespace
```

### Helm Search Output

8	<code>prometheus-community/prometheus-adapter</code>	5.1.0	v0.12.0	A
	Helm chart <b>for</b> k8s prometheus adapter			

[!Note] Was trying to configure grafana to be NodePort but got confused for a long time why “show value” for chart don’t show the grafana.service.type while the installed release shows. The “show value” only shows parent prometheus value while “get values” show the merged values after installation.

Was trying to configure grafana to be NodePort but got confused for a long time why “show value” for chart don’t show the grafana.service.type while the installed release shows. The “show value” only shows parent prometheus value while “get values” show the merged values after installation.
